

Women in Science Technology Engineering & Mathematics

“WiSTEM is open to all NMSU students of all disciplines, faculty, staff of either gender, who are interested in encouraging women’s involvement in STEM related fields. This organization shall be to promote and foster the continuing education and careers of women in the sciences at New Mexico State University.”

Who is WiSTEM?

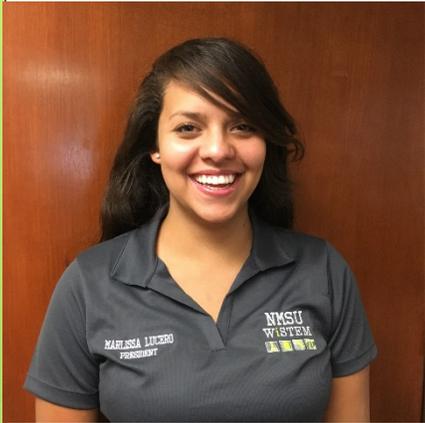

- Women, historically, are an underrepresented group in STEM (Science, Technology, Engineering, & Mathematics) fields.
- Whether that is due to gender bias, stereotypes, or unencouraging schools / workplaces, Women in STEM is an organization committed to the idea that women cannot only work in STEM fields, but also thrive in them.
- Contrary to popular belief, WiSTEM is not just a club for women; it's a collective for both men and women who are ready to further the employment possibilities for everyone, man or woman, through exposure to STEM fields by way of field trips, school visits, and various other activities.

Activities & Outreach

- WiSTEM prides itself in being able to reach out into its community and affect change through a variety of programs and activities aimed with the purpose of exposing any and all who have interest in STEM-related fields to job opportunities as well as educational workshops and trips so as to broaden the community's knowledge base.
